Release Notes for Link Provider Dashboards version 2016.4.v01.00

Release Date: 4/7/16

Purpose of the release

The version 2016.4.v01.00 release of Link Provider Dashboards includes updates to the user interface (UI). This document outlines the new and modified features included in this release.

The major themes of this release include:

- Changes in Link session timeout behavior and terms and conditions functionality
- Enhancements to Link Marketplace search and install/uninstall functionality

About Link Provider Dashboards

Link is an intuitive, self-service experience for care providers and their staff that improves administrative workflow to make their work measurably faster and easier.

Supported browsers

Link Provider Dashboards work best with the following browsers:

- Microsoft Internet Explorer
  - Recommended: versions 10 and 11
  - Supported but not recommended: versions 8 and 9 (Your user experience may not be as functional on these versions.)
  - Note: Use the Tools menu Compatibility View settings to turn off Compatibility View for linkhealth.com and ensure that Display internet sites in Compatibility View is not selected.
- Mozilla Firefox versions 35 and above
- Google Chrome versions 37 and above
- Apple Safari version 7

Enhancements to Link Marketplace functionality

Installed and Uninstall

An Installed label now appears on applications in the Link Marketplace that have been added to a dashboard on a user's behalf. For applications that the user requested, the Link Marketplace displays an Uninstall button that the user can click to remove the application from the dashboard.

Clear Search

When a user types three characters in the Search field, the Clear button displays in the Search field. Clicking Clear hides the Clear button and removes the user's entry.

Enhancements to Link functionality

Change in Link session timeout behavior

Users of Link's single sign-on (SSO) enabled applications will no longer be automatically signed out of the applications as a result of inactivity on Link. Now Link and SSO-enabled applications have separate inactivity timers. The application's inactivity timer will determine when the user is signed out of the application. If the
application does not have an inactivity timer, the Site Minder inactivity timer will apply. The Site Minder inactivity timer will continue to apply to Link.

**Simplified Terms and Conditions**

Users who are already provisioned for dashboards are no longer prompted to accept terms and conditions when granted access to new applications.
